EXECUTIVE SUMMARY

Executive Summary

This report scans your website the way a customer -- and Google -- actually experiences it, and translates every technical issue into plain business terms.

2 critical issue(s) and 0 warning(s) are costing you customers right now.

2

Critical

0

Needs attention

6

Looks good

1. Contact Friction

CRITICAL

WHAT WE FOUND

- Contact issues found: no visible email or contact link; no physical address found on the page.

WHY IT MATTERS TO YOUR BUSINESS

Visitors can see your phone number but can't tap it to call, or can't easily find an email or address -- on mobile that's often the difference between a customer calling and giving up.

WHAT FIXING IT GETS YOU

Tap-to-call links and clear contact info turn casual visitors into phone calls and emails.

2. Search Visibility Basics

CRITICAL

WHAT WE FOUND

- Missing: missing or empty meta description; missing Open Graph tags (used for link previews on Facebook/WhatsApp); no LocalBusiness structured data (JSON-LD) for Google.

WHY IT MATTERS TO YOUR BUSINESS

Your site is missing basic information Google needs to show it in local search results -- you may be invisible to people searching nearby for what you offer.

WHAT FIXING IT GETS YOU

Fixing these basics helps your business actually show up -- and look good -- when nearby customers search for what you offer.

3. Reachability & Uptime

LOOKS GOOD

WHAT WE FOUND

- DNS resolves, the site responded with status 200, and there are no problematic redirects.

WHY IT MATTERS TO YOUR BUSINESS

| Your site resolves cleanly with no unnecessary redirects.

WHAT FIXING IT GETS YOU

A reliably reachable site is the bare minimum for not losing customers before they even see your pitch.

4. SSL / HTTPS Security

LOOKS GOOD

WHAT WE FOUND

- A valid SSL certificate is installed and HTTPS is enforced.

WHY IT MATTERS TO YOUR BUSINESS

 Your site uses HTTPS, so browsers show the secure padlock customers expect.

WHAT FIXING IT GETS YOU

A secure padlock keeps cautious visitors from bouncing before they even read your page.

5. Mobile Load Speed

LOOKS GOOD

WHAT WE FOUND

- Time until visible content appeared, on a simulated mid-range mobile connection: 0.3 seconds.

WHY IT MATTERS TO YOUR BUSINESS

| Your site shows content in 0.3s on a phone -- fast enough to keep visitors around.

WHAT FIXING IT GETS YOU

A faster site keeps more visitors on the page long enough to call, book, or buy -- instead of hitting the back button.

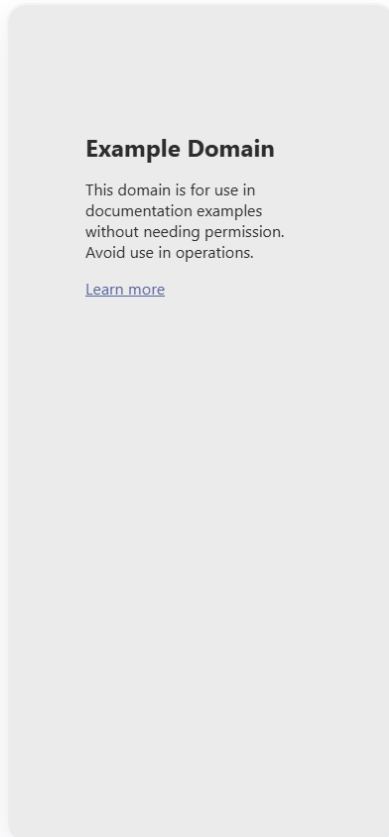

6. Mobile Rendering

LOOKS GOOD

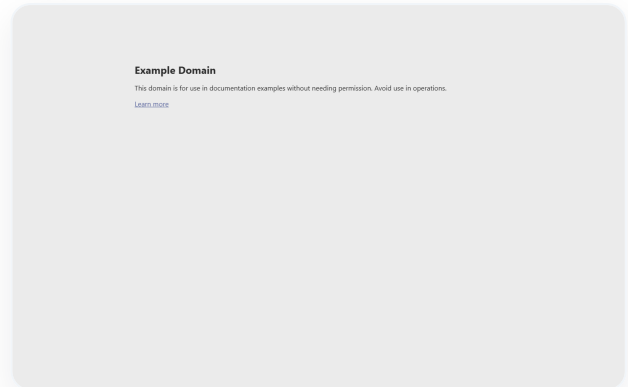

WHAT WE FOUND

- The page rendered cleanly at both mobile (390x844) and desktop (1440x900) viewports.

Your site on a phone

Your site on a desktop

WHY IT MATTERS TO YOUR BUSINESS

Your site adapts cleanly to phone screens.

WHAT FIXING IT GETS YOU

A phone-friendly layout means visitors can actually read your menu, prices, or booking form without pinching and zooming.

7. Outdated Content Signals

LOOKS GOOD

WHAT WE FOUND

- No stale copyright year detected in the footer.

WHY IT MATTERS TO YOUR BUSINESS

■ Your site doesn't show any obviously outdated dates.

WHAT FIXING IT GETS YOU

An up-to-date footer quietly signals "we're open, active, and paying attention" to every visitor.

8. Broken Links

LOOKS GOOD

WHAT WE FOUND

- Checked 0 internal links; none were broken.

WHY IT MATTERS TO YOUR BUSINESS

| All checked internal links are working.

WHAT FIXING IT GETS YOU

Fixing broken links means visitors -- and Google -- can actually get where they're trying to go on your site.

Next steps

The issues above are common, fixable, and worth fixing soon -- every day they stay unresolved is another day of lost visitors and missed calls. Let's fix them.
